

WHAT IS CLAIMED IS:

1. A learning device with page indicators for utilizing a learning card, the learning device comprising:
 - a case;
 - 5 a touch panel mounted on the case and the learning card capable of being disposed on the touch panel; and
 - an electronic control unit electrically connected to the touch panel, the touch panel providing a touching signal to the electronic control unit when touched, and the electronic control unit determining which
 - 10 region of the touch panel is touched according to the touching signal;
 - the learning device with page indicators further comprising:
 - a plurality of page indicators mounted on the case and controlled by the electronic control unit; and
 - the touch panel comprising at least one page indication area, and
 - 15 when the page indication area is touched, the electronic control unit activates a page indicator according to the touching signal.
2. The learning device with page indicators as claimed in claim 1, wherein the page indicator is a glowing indicator, the glowing indicator illuminating when activated.
- 20 3. The learning device with page indicators as claimed in claim 1, wherein the plurality of page indicators are disposed next to at least one edge of the touch panel on the case.
4. The learning device with page indicators as claimed in claim 1 further comprising a clip mechanism mounted on the case, the clip mechanism

capable of clipping a plurality of learning cards together to enable a user to page through the learning cards.

5. The learning device with page indicators as claimed in claim 1 further comprising a plurality of learning cards, and at least every two learning
5 cards have a page actuating mark.

6. The learning device with page indicators as claimed in claim 5, wherein the page actuating marks are along an edge of the learning card, and when the learning cards are placed on the touch panel, the page actuating marks are placed on the page indication area on the touch
10 panel.

7. The learning device with page indicators as claimed in claim 6, wherein the plurality of page indicators are placed next to at least one edge of the touch panel on the case, and when the learning cards are placed on the touch panel, the page actuating mark of each learning card is next to
15 a corresponding page indicator so when each page actuating mark is touched, the corresponding page indicator is activated.

8. The learning device with page indicators as claimed in claim 1 being attached to an electronic device for use as an input device of the electronic device.
